

Team name	SustAid
Product	SustAidmix
School	VHL Food Technology
Captain	Flavio Meola
Teamleden	Andrada Mierlut Marissa Cwach
Coach	Heinz Evers

Sustaid has developed a product called SustAidmix that will help to solve hunger and malnutrition in developing countries. SustAidmix is a tailor-made solution that will fit the health and cultural needs of local communities.

By using modern processing techniques, SustAid can repurpose waste food or use local farm production to create a flexible dry mix with high nutritional values. The dry mix can be used as such or can be used to create several secondary products rich in nutrients such as smoothies, flatbreads, pancakes, cookies and more.

SustAidmix will address a variety of malnutrition issues and reduce hunger while taking into account the cultural preferences of the target group. Furthermore, small production plants are created to help communities in rural areas and help stimulate the local economy while reducing the carbon footprint of product production.
